

ALO 90915-S

Safety coil center with auto band lock

ALO coil center

Our innovative coiling centre is getting smarter and safer. 90915-S is equipped with a safety lock device and will in expanded position securing the center with four hooks into slots on the coil plate. This center is preferable when working with heavy and big blades.

The coiling center have a smart band end locking device that easy secure the band end if you taking up bands, and automatically will release the band end when you are paying off bands.

The center will fit to any ALO coiler and are easy to expand with rigid joints and handle that folds down when the center is expanded. To collapse, simply lift the handle.

The band end locking device is made out of wear resistant material and rest in a socket, but can easy be flipped for coiling clockwise (CW) or counterclockwise (CCW).

*Expanded center
Locking device in the handle.*

*Collapsed center - Releasing
the hooks from the plate*

Besides the joints and band lock, the center is made out of wear resistant light weight plastic and are easy to lift and remove compared to old type of centers.

This center is preferable when working with heavy and big blades.
